ABOUT ME

I have over 9 years of commercial web development experience. I have independently designed and developed frontends for complex web applications, from selecting architectures and technical approaches to implementing business logic, integrations, and ongoing maintenance. My experience includes building new products, modernizing existing systems, refactoring, and optimizing codebases. I have taken full ownership of frontend development and collaborated with large cross-functional teams.

TECHNICAL SKILLS

Core stack	React, Next.js, TypeScript, JavaScript
State management	Redux, Redux Saga, Zustand
UI & styling	HTML, CSS, SCSS, CSS Modules, Material UI, Ant Design, Bootstrap, GSAP, SortableJS
APIs & real-time	REST API, GraphQL, WebSocket, WebRTC
Tools & integrations	Storybook, Postman, Stripe, LaunchDarkly, FFmpeg, SendGrid, GoHighLevel, Plop
Additional experience	Vue.js, WordPress, ACF, PHP, Symfony, Sage, ASP.NET MVC, PostgreSQL

WORK EXPERIENCE

Frontend Developer · Freelance

06.2026–11.2026

Developed and enhanced websites and web applications for clients across industries, maintaining existing solutions and implementing new features.

Frontend Developer · Evne Developers

02.2020–04.2026

Owned frontend development for selected products, from architecture decisions to backend integration. Delivered complex business flows, modernized legacy code, and worked on real-time features, payments, and A/B experiments. Built reusable npm packages, project boilerplates, and development automation for the team.

Web Developer · Freelance

01.2017–02.2020

Independently developed and maintained responsive websites, custom WordPress themes, and content management solutions.

EDUCATION & LANGUAGES

Central Ukrainian National Technical University
Master's degree · Management in IT

Languages
Ukrainian
English — B1 (Intermediate)
Russian

PROJECT EXPERIENCE

Actual product names are withheld in accordance with NDA requirements.

Insurance & digital services

Insurance platform

12.2024 – 04.2026

A life insurance platform with family coverage, multiple plans, benefits, referral programs, and related cremation services.

Role & responsibilities: Took full responsibility for frontend development, including complex business logic, integrations, and interface improvements.

Key contributions

- Restructured the existing frontend application: extracted repeated functionality into components and templates and reduced duplicated code and styles. This made it easier to maintain interface variants and implement experiments.
- Implemented insurance plan logic, family coverage, referral programs, user benefits, and payment flows integrated with Stripe.
- Used LaunchDarkly to support three design variants and numerous A/B experiments within a single codebase. Experiments covered checkout flows, service availability, features, and account profile management.

Vue.js · ASP.NET MVC · Stripe · LaunchDarkly · A/B Testing · REST API

Memorial services

Online memorial platform

09.2024 – 12.2024

A platform for creating memorial pages, collecting donations, producing personalized printed materials, and managing information about the deceased.

Role & responsibilities: Took full responsibility for developing an existing Next.js product, including the frontend, server-side logic, database, and external integrations.

Key contributions

- Redesigned the interface and extensively refactored the existing codebase. Reworked memorial creation flows and introduced LaunchDarkly A/B experiments to explore more effective user interactions.
- Integrated the SendGrid API for automated marketing emails, segmenting users based on PostgreSQL data.
- Developed an interactive editor for personalized PDF brochures, leaflets, and cards, with multiple designs and customizable content.
- Integrated GoHighLevel: migrated thousands of existing users and configured automatic synchronization of new records and data updates between systems.

Next.js · React · TypeScript · Redux · PostgreSQL · SendGrid API · GoHighLevel · LaunchDarkly · PDF Generation

---

Real estate

Real estate commission platform

06.2024 – 08.2024

A web platform for accessing commission information and connecting agents representing different sides of real estate transactions.

Role & responsibilities: Took full responsibility for frontend development across the platform, admin panel, and browser extension.

Key contributions

- Implemented separate flows for seller and buyer agents, including viewing, requesting, and agreeing on commissions for specific properties.
- Independently built a browser extension that let agents view existing commission information directly on popular listing websites or send an inquiry to another agent through the platform.
- Built admin panel interfaces for managing service data, inquiries, and workflows.

Next.js · React · TypeScript · Redux · Material UI · Browser Extension APIs

Service marketplace

Nanny matching platform

03.2024 – 06.2024

A platform for finding and hiring nannies, with user profiles, job listings, applications, candidate management, and built-in chat.

Role & responsibilities: Independently designed and built the React frontend, integrated it with a separate backend API, and implemented session management in Symfony.

Key contributions

- Developed core user flows for creating and managing profiles, posting jobs, handling applications and candidates, and communicating with other users.
- At the client's request, implemented a Symfony server-side layer for managing authentication sessions, tokens, and related user data, keeping these mechanisms separate from the React interface.

React · TypeScript · Redux · Symfony · REST API · Session Management

Manufacturing, B2B & product customization

Custom apparel ordering platform

12.2023 – 02.2024

A platform for personalized apparel orders, including wholesale, retail, and trial orders, with client–manufacturer collaboration and production and delivery tracking.

Role & responsibilities: Worked alongside another frontend developer on a complex interactive order editor and separate interfaces for clients and factories.

Key contributions

- Contributed to an interactive editor for selecting a factory, product type, materials, colors, sizes, prints, labels, cut details, and order quantities.
- Developed customer account functionality for placing personalized orders and tracking their progress.
- Contributed to manufacturer interfaces for viewing orders, updating information, and managing production and delivery statuses.

React · TypeScript · Redux · Redux Saga · REST API

Funeral & hospice services

Planning & service discovery platform

09.2023 – 02.2024 · 03.2020 – 07.2020

A platform for discovering funeral and hospice services, planning ceremonies, and providing informational resources for families.

Role & responsibilities: Worked on the Vue.js frontend as part of a team, gradually taking primary responsibility for its maintenance and modernization. Previously worked on the WordPress part of the product.

Key contributions

- Redesigned and refactored the existing Vue.js application, gradually simplifying the codebase and extracting repeated elements into reusable components.
- Implemented new features, fixed bugs, optimized parts of the application, and improved interface maintainability.
- Developed and updated WordPress blog pages, creating custom widgets and content management templates.

Vue.js · ASP.NET MVC · JavaScript · WordPress · PHP · Sage · SCSS

Developer tools & internal solutions

Shared frontend libraries & development automation

05.2023 – 08.2023

Internal tools for standardizing frontend development: project templates, reusable npm packages, and automated code generators.

Role & responsibilities: Worked largely independently to design and build internal tools, agreeing on priorities and library scope with the team lead.

Key contributions

- Created React and Next.js boilerplate templates with standard architecture, directory structures, configured libraries, styles, and core functionality. This let teams start projects with a familiar structure without repeatedly setting up essential tools.
- Extracted repeated logic, utilities, helpers, and forms into npm packages for use across company projects. Also developed an audio and video calling package and worked on a shared chat solution.
- Introduced Plop automation to generate pages, Redux Saga, reducers, actions, and routing, automatically wiring up the required application parts. This reduced repetitive manual work.

React · Next.js · TypeScript · JavaScript · Redux · Redux Saga · npm · Plop · WebRTC · WebSocket

Events, ticketing & interactive editors

Seating editor & booking platform

02.2023 – 04.2023

A platform for creating interactive venue plans, configuring different seating types and areas, and enabling ticket booking and sales.

Role & responsibilities: Took over responsibility for the frontend of an unfinished project with critical issues, restoring core functionality and completing key features under tight time constraints.

Key contributions

- Analyzed the existing implementation, fixed critical bugs, and reworked problematic editor components to restore core venue plan creation and editing flows.
- Implemented tools for working with SVG plans and placing tables, chairs, standing areas, and other venue elements, with the resulting data used by the booking system.
- Resolved freezes and delays when editing complex venue plans, improving responsiveness and restoring core functionality.

Next.js · React · TypeScript · Redux · Redux Saga · SVG · REST API

Social networks, media & real-time communication

Social platform

08.2021 – 03.2023

A multifunctional social platform with multiple profile types, posts, stores, interactive stories, chats, and audio and video conferences.

Role & responsibilities: Independently designed the frontend architecture and developed the React application. Later worked on its migration to Next.js to support SEO and server-side rendering.

Key contributions

- Developed complex social network flows: different profile and post types, store features, content interactions, and monetization.
- Implemented an interactive stories editor with image and video processing, media cropping, text, and other elements.
- Developed private and group chats, audio and video conferences with screen sharing and active speaker indicators, using WebSocket and WebRTC.
- Migrated a large React application to Next.js with server-side rendering to support SEO and content indexing.
- Optimized backend API interactions by removing unnecessary intermediate requests and working to reduce data transfer volumes.

React · Next.js · TypeScript · Redux · Redux Saga · REST API · SSR · WebSocket · WebRTC · Storybook

Healthcare services

Remote test verification service

05.2021 – 08.2021

A service for remotely verifying medical test completion through photo and video uploads and issuing certificates with the results.

Role & responsibilities: Developed the frontend and step-by-step testing flow without using an SPA framework.

Key contributions

- Implemented a sequential testing process with instructions, photo and video uploads, and SPA-like transitions between steps.
- Integrated API interactions for submitting materials, handling responses, and displaying testing progress states.

JavaScript · jQuery · HTML · SCSS · REST API

Hospitality & CMS

Resort hotel website

03.2021 – 05.2021

A WordPress resort hotel website with a room catalog, additional services, informational pages, and a blog.

Role & responsibilities: Developed the website and a flexible content management system that let the client create and edit pages independently.

Key contributions

- Extracted repeated design elements into separate templates and used ACF to configure their content, appearance, display variants, and ordering.
- Implemented reusable blocks that let the client independently create pages and change their structure without developer involvement.

WordPress · PHP · Sage · ACF · JavaScript · SCSS · Bootstrap

Consulting & specialist marketplace

Consultant marketplace

02.2021 – 04.2021

An online platform for finding consultants, publishing listings, and organizing collaboration between clients and specialists.

Role & responsibilities: Worked alongside another frontend developer to maintain and extend an existing React application.

Key contributions

- Implemented new features, fixed bugs, and maintained flows for finding specialists, handling listings, and using multilingual interfaces.
- Developed the UI kit and style guide, extracting repeated elements into components, reducing code duplication, and simplifying future interface maintenance.

React · TypeScript · Redux · Redux Saga · REST API · Material UI

CRM & internal business systems

Project management & time tracking system

11.2020 – 02.2021

An internal system for managing IT projects, with tasks, time tracking, KPIs, analytics, planning, and project completion forecasts.

Role & responsibilities: Took over responsibility for the frontend of an existing CRM system and continued its development in collaboration with a backend developer.

Key contributions

- Developed new modules and administrative interfaces for managers and teams, including tables, charts, statistics, task management, and time tracking.
- Built dashboards for KPIs, targets, and project completion forecasts, using GraphQL and Relay to work with the data.
- Maintained and extended the existing application, independently implementing frontend tasks.

React · TypeScript · GraphQL · Relay · Ant Design · Jest

Construction materials & corporate websites

Supplier corporate website

06.2020 – 10.2020

A multilingual corporate website for a hardware, glass, and metal construction supplier, with a product catalog and content management tools.

Role & responsibilities: Maintained and developed a custom WordPress theme, product catalog, and admin panel functionality.

Key contributions

- Updated existing page designs, developed new templates, added product categories, and fixed website bugs.
- Extended catalog and content management through ACF and custom post types, and maintained multilingual functionality.

WordPress · PHP · Sage · ACF · Bootstrap · HTML · SCSS · JavaScript

---

Corporate website, portfolio & landing pages

IT company corporate website

02.2020 – 06.2020

A corporate WordPress website for an IT company, featuring completed projects and dedicated landing pages for its products and services.

Role & responsibilities: Developed the company's website, created templates for publishing project case studies, and built responsive landing pages.

Key contributions

- Developed portfolio templates that let the team add new projects, organize information, and showcase completed work on the website.
- Created more than ten landing pages with distinct designs and responsive layouts to showcase company products.

WordPress · HTML · CSS · SCSS · JavaScript
